

I-MediSync QEEG Mapping

Non-invasive brain scan that measures the brain's electrical activity (brain waves)

Looks at how the brain is functioning in real time

Generates a clear report

No sticky paste required

Uses small sensors

Provides a "map" of how different parts of the brain are working and communicating

Suitable for children and adults

Provides objective data to guide our brain based interventions

Helps us understand how the brain is functioning and organised

Helps track progress – showing how the brain changes with therapy

Fast and accurate

Safe, painless

No radiation

Gives you a visual understanding of what's happening in the brain

Helps us focus on the specific area needing balance

Shows which areas of the brain are over or underactive in the brain

Shows connectivity between brain regions – how well the brain is talking to itself

Helps identify patterns of brain activity and imbalances often seen in ADHD, autism, anxiety, learning or language difficulties, behaviour or regulation challenges
