

Chiropractic Care : not your typical Chiropractor

At Children's Therapy Services Queensland, we do things differently.

This is not about cracking bones or quick adjustments.

This is about understanding your child's nervous system, development and whole body.

We look beyond symptoms, we ask:

1. How is your child's nervous system functioning?
2. Are their foundations for movement and regulation strong?
3. Is their brain and body communicating effectively?

We may include Neural Organisation Technique (NOT) supporting the nervous system to move out of fight/flight into a calmer, more regulated state

We may include low-level laser therapy to support regulation, gut health, vagus nerve function and brain/body communication

When the nervous system feels safe, everything else can develop

Sessions are gentle, tailored to the child, focused on helping the child feel safe and supported

We look at the whole child, not just the symptoms

Supports injury/pain

Supports ADHD

Helps improve tolerance to environments

Supports speech and oral function by improving posture, breathing and nervous system regulation

Supports more effective movement patterns, body awareness and better coordination

Helps reduce sensory sensitivities

When a child's nervous system is more organised we often see calmer behaviour, better focus and attention, stronger connections with others and improved confidence and well-being

We may include dynamic Neuromuscular Stabilisation (DNS) which supports rebuilding strong foundations for movement, posture and coordination

Sessions support their development, strengthens their foundations and helps them feel calm, confident and connected

We are neurodevelopmentally informed

We take a gentle child centered approach

Helps sleep difficulties

Releases trauma

Helps reduce anxiety

Helps improve emotional regulation

Helps children feel calmer and more settled

Supports gut health

Helps improve ability to cope with daily demands
